

Manoj Ram Mopati

Birmingham, United Kingdom | 07810294727 | manojrammopati111@gmail.com | [LinkedIn](#)

Profile

Data Scientist with over 3 years of hands-on experience in data modelling, data manipulation, statistical analysis and generating actionable insights across retail, consumer products and insurance data domains using SQL, Python, R, Power BI and Tableau. Proficient in building end-to-end data science pipelines and developing machine learning algorithms and ensuring model deployment through MLOps practices. A focused and flexible self-starter who works independently and adapts quickly to changing business needs.

Professional Experience

DATA SCIENTIST | INFOSYS LIMITED | SEPTEMBER 2023– MAY 2025

- Developed sales portfolio analytics and reporting platform using Azure SQL and Power BI for the entire US Billion-Dollar market which resulted in better revenue management.
- Implemented Marketing Mix Modelling (MMM) techniques, utilising sales, pricing, promotion and marketing data to analyse the strategy effectiveness and promotional activities to optimise marketing spend allocation to enhance revenue growth.
- Implemented end-to-end data science workflow and built model datasets for building and testing predictive algorithms like log-log linear regression and validated metrics on large datasets over the last 3 years of data utilising Python, PySpark, SQL and R.
- Designed and deployed the end-to-end machine learning lifecycle with Microsoft Azure Services Databricks, Data Lake, SQL, Azure ML, DevOps and Git into production environments.
- Created trade promo optimisation tools for the retail business users across 100+ CTAs which increased profit margins by 5-8% through strategic planning trade merchandise.
- Collaborated with cross-functional teams of data scientists, data engineers, product owners and business analysts to define requirements, support ingestion pipelines, validate model outputs and translate analytical results into business insights.

ASSOCIATE DATA SCIENTIST | INFOSYS LTD | DECEMBER 2022 – SEPTEMBER 2023

- Created an RFM model using Python to segment 200K+ customers based on payment behaviour and outstanding debt, identifying high-, medium-, and low-risk profiles.
- Enabled targeted debt recovery strategies by aligning resource allocation with customer risk tiers, increasing recovery rates by 14%, and reducing average recovery time by 12 days.
- Wrote complex SQL queries and python scripts for data cleansing and data manipulation tasks for performing analysis on large datasets.
- Prepared executive-level Power BI and Tableau dashboards visualising customer segments, transactions, debt ageing, total exposure, and recovery status, supporting data-driven decisions.

ASSOCIATE DATA ANALYST | INFOSYS LTD | FEBRUARY 2022 -DECEMBER 2022

- Processed and analysed 1M+ claims, policies and provider records using SQL, Power BI and Excel to identify SLA breaches, and claim success / failure rates, claims risk patterns, policy handoffs, and payment delays.
- Implemented Power BI dashboards to monitor real-time claim risks, adjuster performance, and resolution bottlenecks, improving process visibility for operations teams.
- Collaborated with data scientists, Product Owners, business analysts and operations teams to present insights, support user stories, contribute to backlog refinement and prepare project reports and audit documentation.

Skills

Programming Languages: Python, SQL, PySpark, R.

Data Science & ML: Regression, classification, clustering, time series, NLP, RFM segmentation, tree-based models, Gen AI, model evaluation, data mining, data processing, visualizing, feature engineering, feature selection, model dataset creation, statistical modelling.

Cloud: Azure Services (Databricks, Data Factory, Data Lake, SQL, Azure ML, DevOps), GCP.

BI & Reporting: Power BI, Microsoft Fabric, Power Query, DAX, Tableau, Looker Studio, Excel

MLOps & Delivery: GitHub, CI/CD, Docker, version control, model lifecycle management, data quality checks, Agile/Jira, Git.

Libraries: pandas, NumPy, scikit learn, SciPy, TensorFlow, PyTorch

Other Skills/Tools: Jupyter Notebooks, R-studio, apache airflow, A/B testing, Hypothesis testing, data governance, project lifecycle management.

Education

- **Master of Science in Data Science** | May 2025 - May 2026 | Expected 70% | Coventry University, Coventry, United Kingdom.

Modules: Entrepreneurial Practice, Machine Learning, Data Management Systems, Data Science Project, Big Data Analytics and Data Visualization, Individual Research Project.

Academic Projects:

NLP Sentiment Analysis for Customer Reviews: Analysed a text classification model using TF-IDF, SVM, Naive Bayes and Random Forest to classify review sentiment and generate marketing insight.

Customer Churn Prediction & Big Data Analytics: Built a PySpark and Tableau workflow for churn prediction, including feature engineering, Logistic Regression, Random Forest and model evaluation.

RAG Analytics Assistant for Business Reports: Developed a GenAI assistant concept using retrieval-augmented generation to query business reports and return source-grounded summaries.

Marketing Mix Modelling Simulator: Built a Python based simulator to estimate sales contribution, ROI and budget allocation scenarios across pricing, promotion and marketing drivers.

- **Bachelor of Technology in Mechanical Engineering** | July 2017 - June 2021 | 65% (2:1 Honours) Visvodaya Engineering College - Kavali, Andhra Pradesh, India.
