Profile

Data Scientist with 3+ years' experience of delivering data manipulation, data modelling, statistical analysis, business intelligence outputs and clear insights that informed decisions across retail, consumer goods and insurance data domains using SQL, Python, R, Power BI and Tableau. Proficient in building end-to-end data science pipelines and developing machine learning algorithms and ensuring model deployment through MLOps practices (CI/CD, Docker, Git). A focused and flexible self-starter who works independently and adapts quickly to changing business needs.

Professional Experience

Data Scientist | Infosys Limited | Bangalore, India | Sep 2023– May 2025

- Developed a sales-portfolio analytics and reporting platform using Azure SQL and Power BI for the entire US Billion-Dollar market which resulted in better revenue management.
- Implemented Marketing Mix Modelling (MMM) techniques using sales, pricing, promotion and marketing data to analyse strategy effectiveness and promotional activities to optimise marketing spend allocation.
- Implemented end-to-end data science workflow and built model datasets for building and testing predictive models such as log-log linear regression and validated metrics on large datasets over the last 3 years of data with Python, PySpark, SQL and R.
- Designed and deployed the end-to-end machine learning lifecycle, including model deployments and monitoring with Microsoft Azure Services such as Databricks, Data Lake, SQL, Azure ML, DevOps and Git into production environments.
- Created trade-promo optimisation tools for retail business users across 100+ regions which increased profit margins by 5-8% through strategic trade-merchandise planning.
- Collaborated with cross-functional teams of data scientists, data engineers, product owners and business analysts to define requirement gathering, support ingestion pipelines, validate model outputs and translate analytical results into business insights.

Associate Data Scientist | Infosys Limited | Bangalore, India | Dec 2022 – Sep 2023

- Built an RFM model using Python to segment 200K+ customers based on payment behaviour and outstanding debt, identifying high-, medium-, and low-risk profiles.
- Enabled targeted debt recovery strategies by aligning resource allocation with customer risk tiers, increasing recovery rates by 14% and reducing average recovery time by 12 days.
- Wrote complex SQL queries and python scripts for data cleansing and data manipulation tasks for performing analysis on large datasets.

- Developed executive-level Power BI and Tableau dashboards visualizing customer segments, transactions, debt ageing, total exposure, and recovery status, supporting data-driven decisions.

Associate Data Analyst | Infosys Limited | Bangalore, India | Feb 2022 –Dec 2022

- Analysed 1M+ claims, policy and provider records using SQL, Power BI and Excel to identify SLA breaches, claim success/failure rates, risk patterns, policy handoffs and payment delays.
- Built Power BI dashboards to monitor real-time claim risk, adjuster performance and resolution bottlenecks, improving visibility for operations teams.
- Worked with data scientists, product owners and operations teams to present insights, support user stories, refine the backlog and produced project reports and audit documentation.

Skills

Programming Languages: Python (pandas, NumPy, scikit-learn, SciPy, TensorFlow, PyTorch), SQL, PySpark, R.

Data Science & Machine Learning: Linear Regression, classification, clustering, time series, NLP, GenAI / RAG, tree-based models, RFM segmentation, data visualisation, feature engineering, log-transformation, statistical modelling, predictive modelling.

Cloud & MLOps: Microsoft Azure (Databricks, Data Lake, SQL, Azure ML, DevOps), Git, GCP, Docker, Apache Airflow, CI/CD, Model Lifecycle Management.

BI & Reporting: Power BI, Microsoft Fabric, Power Query, DAX, Tableau, Looker Studio, Excel

Additional Skills/Tools: stakeholder management, forecasting, experimentation, ETL, KPIs/metrics, data warehouse, reporting, ad-hoc analysis, dashboarding, Agile, Jira, probability, statistics, data quality checks, Jupyter Notebooks, RStudio, A/B testing, hypothesis testing, data governance.

Education

- **Master of Science in Data Science** | May 2025 - May 2026 | Grade: 70% | Coventry University, Coventry, United Kingdom | Right to work: UK Graduate visa.

Modules: Entrepreneurial Practice, Machine Learning, Deep Learning, Data Management Systems, Data Science Project, Big Data Analytics and Data Visualization, Individual Research Project.

Academic Projects

RAG Analytics Assistant for Business Reports : GenAI assistant using retrieval-augmented generation (LangChain, FAISS, Streamlit) to query business reports and return source-grounded, cited summaries; local-first with optional LLM APIs and an offline evaluation harness.

Health Insurance ML Pipeline : medallion PySpark pipeline over 62K+ records training churn, fraud and high-cost-claim models, with Docker and CI/CD.

Customer Churn Prediction Service : Random Forest churn model served via FastAPI, containerised with Docker and deployed to Azure Container Apps with GitHub Actions CI/CD.

- **Bachelor of Technology in Mechanical Engineering** | July 2017 - June 2021 | 65% (2:1 Honours), Visvodaya Engineering College - Kavali, Andhra Pradesh, India.
